Coursera - IBM Data Science Capstone Project

Where should I open an pizza place in Melbourne, Australia?

Steps:

- 1) Scrape a wikipedia page and make Pandas dataframe of Melbourne suburbs.
- 2) Get the latlongs of each suburb.
- 3) Get neighbourhoods' venue data using Foursquare API
- 4) Find and explore clusters
- 5) Select the most suitable cluster

Observations and analysis:

The results from the k-means clustering shows we can categorize suburbs in 3 clusters based on the frequency of occurrence for "Italian restaurant":

- Cluster 0 (red in map): Suburbs with low concentration of pizza places; around 46%
- Cluster 1 (blue in map): Suburbs with high concentration of pizza places; around 19%
- Cluster 2 (green in map): Suburbs with medium pizza places; around 35%

Analysis shows that most pizza places are clustered around mid city. This is just where the commercial areas end and the residential areas begin. One exception to that is Brunswick, where there is the famous Lygon street full of Italian restaurants and pizza places.

If a person were to open a pizza place in Melbourne, according to me the place should be somewhere in cluster 1, where there is a high concentration on pizza places. A high concentration of pizza places suggests that there is a high demand for pizza in those aread. However, a high concentration also means high competition. So one must open a pizza place where there is a high demand and then differentiate the product offering in a way that is able to beat the competition and stand out. So, I would suggest that a person should open a pizza place on Lygon street in Brunswick with a highly differentiated and competitive product offering.
